## **DETAILED ACTION**

## Claim Rejections - 35 USC § 112

1. Claims 1 and 8 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention. The claimed recitation of "the interface logic circuits collectively operable to prevent contention of signals on the internal three-statable bus" and "preventing contention of signals on the internal three-statable bus collectively using the plurality of interface logic circuits" were not described in the specification.

## Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States
- 3. Claims 1, 2 and 7 are rejected under 35 U.S.C. 102(b) as being anticipated by Sasaki (U. S. PAT. 5,504,440).

In claim 1, Sasaki teaches all claimed features in Figs. 2-4, a programmable logic device, comprising: an internal three-statable bus (23, 27); a plurality of driving elements (52s, 53s) coupled to the internal three-statable bus, each driving element operable to drive the internal three-statable bus; and a plurality of interface logic circuits

Application/Control Number: 10/811,422

Art Unit: 2819

(62s, 64s), each (62a or 62b or 64a or 64b) of the plurality of interface logic circuits coupled to a different one (52a or 52b or 53a or 53b) of the plurality of driving elements, each interface logic circuit (62a or 62b is a tri-state driver) operable to determine whether the internal three-statable bus is being driven.

In claim 2, Sasaki further teaches the programmable logic device of claim 1, further comprising support circuitry (58, 59) coupled to the internal three-statable bus (23, 27) and the plurality of driving elements (52s, 53s).

In claim 7, Sasaki teaches all claimed features in Figs. 2-4, a method, comprising: driving an internal three-statable bus (23, 27) using at least one of a plurality of driving elements (52s, 53s); determining whether the internal three-statable bus is being driven using at least one of a plurality interface logic circuits (62s, 64s), each (62a) of the plurality of interface logic circuits coupled to a different one (52a or 53a) of the plurality of driving elements.

4. Claims 4-6 appear to comprise allowable subject matters.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Vibol Tan whose telephone number is (571) 272-1811. The examiner can normally be reached on Monday-Friday (7:00 AM-4:30 PM).

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Mike J. Tokar can be reached on (571) 272-1812. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.
